

### FD1050Y

A "MANUAL RELEASE" indoor call point with activation and end of line resistor making it compatible with the Teledata FD5200 Fire Extinguishing Control Panel. When activating the FD1050Y call point, a manual triggering signal will be received in the FD5200 panel and the countdown release timer procedure will be started.

### FD1050B

An "EMERGENCY STOP" indoor call point with activation and end of line resistor making it compatible with the Teledata FD5200 Fire Extinguishing Control Panel. The countdown release timer will be restarted from the beginning by each release of the FD1050B emergency hold call point.

### FD1050G

A "EXTENSION RELEASE" indoor call point with activation is independent from the UniPOS FD5200 Fire Extinguishing Control Panel. When activating the FD1050G call point, an additional extension agent (carbon, dioxide, halon, argon etc.) will be released.
